Module 1 - Introduction: Value Education

What this unit covers: why value education matters - the need, content, process, and the basic guidelines: happiness, prosperity and their continuity.

Key ideas: Value education teaches what is universally valuable for a human being, not just skills for a job. Every human wants two things: **happiness** (a state of harmony within) and **prosperity** (the feeling of having more than enough physical facilities) - **continuously**. The current crisis comes from chasing facilities while ignoring relationships and understanding. The unit introduces **self-exploration** as the process: verify proposals on your own right, in your own experience - don't accept them because a book says so, don't reject them without testing. Basic human aspiration = continuous happiness and prosperity; these come from **right understanding + right feelings**, not from money alone.

Exam pointers: definitions with one example each: value education, happiness, prosperity, self-exploration (with its two steps). "What is the need for value education in the present scenario?" is the standard long answer - answer it with the gap between facilities and fulfilment.

Module 2 - Harmony in the Human Being

What this unit covers: harmony in the human being - understanding the Self (I) and the Body as two co-existing realities, and what each needs.

Key ideas: A human being is **Self (I) + Body**. The Self is conscious - its needs are **continuous happiness** (feelings like trust, respect); the Body is material - its needs are **physical facilities** (food, shelter), needed only in limited quantity, temporarily. The activities differ too: the Self does **imagination** (desire, thought, expectation); the Body does **recognising and fulfilling**. Confusing the two - trying to get continuous happiness from physical facilities - is the root of dissatisfaction. The Self is the **seer, doer and enjoyer**; the Body is an instrument. Right understanding keeps the Self in charge, and the Body stays healthy as a result.

Exam pointers: "differentiate between the needs of the Self and the Body" in a table (continuous vs temporary, quantitative vs qualitative...) is the most repeated question. Also common: "human being as co-existence of Self and Body" and the four activities of the Self (imagination: desire, thought, expectation).

Module 3 - Harmony in the Family & Society

What this unit covers: harmony in the family and society - relationships, the nine feelings (values) in relationship, and the goal of an undivided society.

Key ideas: The family is the first place we live relationship. Relationship rests on **feelings**, not just physical exchange. The nine feelings: **trust** (foundation - being assured the other intends my happiness), **respect** (right evaluation - the other is similar to me), affection, care, guidance, reverence, glory, gratitude, love (complete - the feeling of being related to all). **Justice** = recognition, fulfilment and right evaluation in relationship, leading to mutual happiness. The societal goal: **undivided society (akhand samaj)** and **universal human order (sarvabhauma vyavastha)** built on five dimensions - education-sanskar, health-self-regulation, production-work, justice-preservation, exchange-storage.

Exam pointers: the nine feelings list (with trust and respect explained in 2-3 lines each) is asked again and again. "What is justice in human relationship?" and "goals of a universal human order (the five dimensions)" are the standard long answers.

Module 4 - Harmony in Nature & Existence

What this unit covers: harmony in nature and existence - the four orders of nature, their interconnectedness, and existence as co-existence.

Key ideas: Nature has **four orders**: **material** (soil, water, air), **pranic/bio** (plants), **animal**, and **human**. Each order has its own activity and **innateness** (svabhava): material order exists; pranic order lives and grows; animals live with will; humans alone have the capacity to **know**. The first three orders are already in harmony and **mutually fulfilling** - only the human order breaks the cycle by exploiting the rest. **Existence** = co-existence: units (everything we see) submerged in **space** (the all-pervading, no-activity reality). Everything is in space; space is the ground of all energy. **Holistic perception** means seeing this interdependence.

Exam pointers: "describe the four orders of nature with their innateness and activities" in a table is the guaranteed question. "Existence as co-existence (units submerged in space)" and "why is there a need for harmony in nature / recyclability and self-regulation" are the usual theory answers.

Module 5 - Harmony in Professional Ethics

What this unit covers: professional ethics - taking the harmony of the previous units into work and profession.

Key ideas: Professional ethics = conducting a profession with right understanding, so work serves human good, not just profit. Distinguish **competence** (skill) from **character** (values) - industry needs both. The five dimensions of human order map onto profession: production that enriches nature (not depletes it), work with responsibility, justice in dealings. **Holistic technology** is human-friendly, eco-friendly, and fits the real need. The unit also covers common contradictions: unethical practices (corruption, exploitation) arise from wrong goals; the answer is **value-based profession and management**. Competence in professional ethics = clarity about human goal + confidence in oneself + competence in mutually enriching production.

Exam pointers: "what is professional ethics / why is it needed today" and "competence in professional ethics (its three parts)" are the standard questions. Case-based answers score well when you connect the issue back to Self vs Body needs or the four orders - one concrete example lifts the answer.
